How the hell have you managed to kill your PC Daz?

From what Deadguy was saying last night you'd just have a fresh install how've you managed to kill it?

Now allthough the server is back I am unable to connect to it I get an error message I don't if its not been updated to 1.3 or if the command line just doesnt work just putting it out there.

It says some .ff file is from from the server, but I can connect to other servers fine.
