
Battlefield Bad Company 2 Beta

Ok boys Play.com has the offer where you get a beta key with the pre-order of BC2 now I think everyone can place an order, get the key and if we dont like it or if it doesnt work on some of our machines then we can simply cancel the pre-order this way we guarentee that we will play the beta and we can play a game with dedicated servers.

Note- I think it is unlikely that we will be getting a BC2 server of our own as EA are only distributing BC2 to approved server companies this way no hacked servers, no hacked servers less piracy or so the theory, but this means that a 24man server for the year would be £700 which works out at around £30 per slot for the year, I think I can speak for everyone when I say "SERVER RAID".

Hey !

Server Raiding is my phrase :blink:

I have already done my pre-ordering last week, so waiting for the end of the month.

I've ordered mine today. I've got to wait 24 hours for key...pffff.

Although I don't think this will run properly for me, I though best to give it a go, especially in light of Nino's forum reponse (no ded servers for MW2). I can't play that f&*KING S&\$T for much longer.

It's doin' me 'ed in!!!

Its not available for download yet!!!!

But on the plus side

PC upgrade complete!!!

Heavy case modification needed!!! Bits of plastic everywhere!!

Windows 7 installed!!!

Can't log on to teamspeak server because its now teamspeak v3 and I cant get it to work!!!

Fuck yeah only 46mins to go <http://electronicgamers.net/bfbc2/>

It's now 17:33. BC2 Website is f&%ked up! = no download.

I have downloaded the X360 version, however, you can't connect to a game.

It doesnt work!!!!

Re:Battlefield Bad Company 2 Beta

Yeah I know, it appears it takes the Clan Tags and applies it to all of your soldiers, I should be Orca, but my original is the one you have found D'oh!

:ak47:

What doesnt work Nino ?

The installer or the Game ?

Re:Battlefield Bad Company 2 Beta

The game but I dont think it installs properly it takes about 30secs and the game folder in c/program etc is only 1.6gb when I read it should be at least 3 to 5gb, it opens up in a 640x480 resolution box and when I click on the box it disappears and thats it if I sit and watch it goes to the main menu bus as soon as I click on it, it crashes.

How big is the install folder?

I have just downloaded it from a more reliable source only took 2 hours and it now says I have the old version and that I should update it but it cant connect to the server

I have some info about the release of the game and how it affects us,

1) My problem is flickering screens even though I can get upto 130 frames per second - It turns out that this is because the game does not recognise dual cards like mine thats why Lee's works fine and mine doesnt, this will be sorted come release.

2) Laggy or low frames persecond, this will also be sorted come release and DICE hope to sort this during the beta they have apparently not yet perfected the optimisation for the game so as of yet the game doesnt really support dual and quad core tech or GPU's
