OK, when we are putting new maps on you have 2 choices of how to get them.

1) Auto download via the in game HTTP Redirect which gives you your normal HTTP Download speeds

or

2) Use the website to grab them direct [Website Here](#)

But at the moment we are uploading maps and havent verified that they work properly - you might aswell use the ingame one :P

The object of this post is get people to post up if they find maps that they would like to see on our server.

The thing is we can always merge the stock maps in with the custom maps for a bit of the norm, but remember we still need to run stock mode so we can get all of the members upto 55 status...
